

Company Backgrounder

- Mission** Become a premier provider of Digital Collaboration Bridges and Home Land Security platforms that leverage burgeoning packet based enterprise and service provider networks. XOP stands for 'Everything Over Packets'.
- Business** With advances in voice over packet technologies and continued growth of Internet based services, stage is being set for next generation of value-added service platforms.
- XOP Networks' Digital Collaboration Bridges provide seamless integration of **Audio Conferencing** and **Web Conferencing** over current TDM and VoIP networks thereby enabling virtual meeting experience for the end users.
- XOP Networks' **Enhanced Firebar** solution enables instantaneous conference between 'First Responders' when handling an emergency situation. Its built in 'find-me' capability locates a responder at one of his/her multiple phone numbers and then can bring him/her into a conference if needed.
- XOP Networks' **Advanced Messaging** solution allows prerecorded voice messages, SMS or Pager messages to be sent to thousands of people very quickly. This capability can be used for disseminating emergency and non-emergency related messages to small or large groups of people.
- Corporate** Founded in January 2003, XOP Networks, Inc is a privately held corporation.
- Team** The XOP Networks' management team encompasses a group of successful technology entrepreneurs with proven track records. Prior to founding XOP Networks, the management team members were in executive and senior management positions at Rockwell Int'l, DSC/Alcatel, Accelerated Networks and MCI. At these companies the individuals were instrumental in directing the definition, development, and marketing of a variety of telecommunications products to enterprises and service providers worldwide.
- The company maintains a development office in New Delhi, India.
- Customers** The XOP Networks' customers are medium to large enterprises and city/county governments. The company markets its products through OEM partners, Inter-connect companies, PBX manufacturers and through direct sales.
- Key Benefits** The XOP Networks Digital Collaboration Bridges are multi-service platforms. These products become an in-house resource for meeting an enterprise's audio and web conferencing needs. The same platform can also be equipped with Enhanced Firebar and Advanced Messaging applications. This multi-service approach yields better return on customer's CAPEX and OPEX Dollars.
- Products** The XOP Networks' product line comprises of Digital Collaboration Bridge (DCB) platforms that can scale from 8 ports to 240 ports in one industrial grade, rack mountable, 19" wide server.
